

Livestock Program April 2024

Every 5 years, NASS conducts a program review following the completion of the Census of Agriculture. The primary purpose is to ensure that the NASS annual estimating program targets commodities and states most relevant based on the latest available information. Last fall we announced the program review and requested stakeholder input.

The primary source of information for the program review is the Census of Agriculture, since it is the most comprehensive source of data; however, we also take into consideration estimates from the current annual estimating program and administrative data.

The program changes balance resources across all programs included in the annual estimating program, which represents over 400 individual reports.

Modification to Mink Program

NASS plans to reduce publication for mink pelts produced and females bred to produce kits by State for *Mink*. NASS will no longer publish state level data by color class.

Modifying published data items by states in the January Cattle program.

NASS plans to reduce the number of published states for *Cattle* from 50 states to 31 states. Although NASS will publish all cattle and calves inventory, all cows inventory, and calf crop for those 19 states. The 19 states will be Alaska, Connecticut, Delaware, Hawaii, Indiana, Louisiana, Maine, Maryland, Massachusetts, Mississippi, Nevada, New Hampshire, New Jersey, North Carolina, Rhode Island, South Carolina, Utah, Vermont, and West Virginia.
