www.nass.usda.gov/nh Week ending June 24, 2018 Issued weekly on the internet, April - November by the Northeastern Regional Field Office of NASS

nassrfoner@nass.usda.gov Released June 25, 2018

Good week for field work: New England averaged 5 days suitable for field work last week. New England received much needed rainfall over the past week. Regional weekly temperatures ranged from 4 degrees below to 4 degrees above normal. Weekly precipitation ranged from 0.02 to 4.60 inches throughout the region. Welcome rainfall in the beginning and end of the week helped crops recover from the dry weather conditions in previous weeks. Hay yields appeared to be slightly down from 2017 production. Corn growth was slightly behind 2017 due to the dry weather as well, but the rain helped corn catch up considerably in size. Operations that have been using irrigation systems this season had robust looking fruit and vegetables. Orchardists mowed orchard floors and were monitoring pests and crop development. Field activities for the week included applying pesticides and nitrogen, tilling, manure spreading, plowing, disking, fertilizing, equipment repair and maintenance.

REPORTERS COMMENTS, By County

Reporters are from Extension Service (Ext), Natural Resources Conservation Service (NRCS), Farm Service Agency (FSA), Conservation District (CD), farmers, commodity specialists, or other knowledgeable individuals.

CONNECTICUT

LITCHFIELD, Richard Meinert

Nitrate testing corn. Results are mixed. Wet conditions early have caused a fair amount of denitrification, resulting in increased need for topdress nitrogen. Leafhopper has moved into western CT. Several fields of alfalfa have been damaged.

MAINE

CUMBERLAND/YORK, Sandy Truslow

Some welcome rain received Monday night, although some areas only received .5". Fields that did not receive any irrigation have poor germination and growth. Hay is being cut at a rapid pace between light showers. Still could use more rain.

FRANKLIN, Gary J. Raymond

Rain is slowly helping grass rebound. First crop quantity was off by 25 to 40 percent. Other crops are growing well with the recent rain.

PENOBSCOT/PISCATAQUIS, Donna Coffin

Hay yields have been down due to earlier dry weather. Current rain will help with second crop. Strawberries are being harvested.

WASHINGTON, Audre Hayward Dry conditions.

MASSACHUSETTS

ALL MA COUNTIES, Tom Smiarowski

Latest version of U.S. Drought Monitor extended "abnormally dry" conditions westward to include all of Massachusetts with the exception of Southeastern Massachusetts. Most parts of Massachusetts had good rainfall on Sunday with some locations receiving up to 1". Great strawberry crop this year.

HAMPSHIRE/HAMPDEN, Heather Baylis

Weather continues with wide ranges of temperatures. Needed the rain that came on Sunday night into this Monday's morning. Farmers markets are filling up with more variety

PLYMOUTH, Steve Ward

Cranberries are certainly benefiting from the drier conditions as compared with the cold wet conditions earlier this spring. As the cranberries come into bloom over the next couple of weeks, growers will be looking for sunny warm condition to keep the pollinators active.

NEW HAMPSHIRE

COOS, Steve Turaj

Some heavier rains early in week but variable accumulation depending on where located. First cut dry hay harvest has begun as Timothy headed out; looks decent, when showers avoided. Early fields taken as haylage re-growing ok but can use some rain, as can corn. Field corn on some farms nearly ready for top-dress nitrogen. Corn is somewhat behind this year, haylage harvest is probably down some as well.

GRAFTON, Heather Bryant

This week we did see some rain, but conditions are still dry. Reports of winter injury in fruit crops and hay fields burning after cutting are still coming in.

GRAFTON, Steven Schmidt

For the week ending June 23, there was no rain fall until the weekend. Top soil conditions remained very dry. Second cut hay has not come back well due to the lack of top soil moisture. Field corn development has remained suppressed due to the lack of rain.

HILLSBOROUGH, George Hamilton

Very light rains have hardy helped the very dry soil moisture levels. Growers irrigating during week. Fruit: strawberry harvest continues, with fruit size being small. Fruit growers mowing an orchard floor, monitoring pest and crop development and apply sprays for pest control. Few fire blight strike seen and apple scab lesions are appearing. Codling moth trap counts reported to be high compared to previous years. Oriental fruit moth injury seen on newly planted peach trees that were not sprayed. Field crops: farmers making hay between showers. Farmers are side dressing fertilizer to field corn, if needed, and to hay fields. Vegetables: IRRIGATING! Growers continued harvesting vegetables such as summer squash, beets, greens, radishes, rhubarb, spinach and zucchini. Weeds are plaguing growers. Farmers are side dressing fields with fertilizer, cultivating and hand-hoeing weeds, scouting for pests and spraying. Increasing numbers of squash vine borer moths are been caught! European corn borer is being seen.

ROCKINGHAM, Nada Haddad

Harvesting broccoli, sugar snap peas, lettuce, greens, strawberry, greenhouse tomatoes, cucumbers, herbs and the first blueberries after a mini heat wave during the day on Monday June 18; late afternoon saw and reported a microburst that fortunately didn't land in the area in Newmarket and Durham. Other towns were also affected and saw tree branches and uprooted urban trees and power outages for several outages. Rain was welcomed at the end of the week and about an inch of rain came in the last 3 days. It's been a relatively good week for haying. Planting field corn.

SULLIVAN, Jennifer Z. Gehly

A strong front moved through Monday afternoon bringing strong winds and heavy rains to parts of the counties. Southern Cheshire County was affected the most. The week was clear and dry. A much needed slow, steady rain fell during the weekend, however we could use a bit more. Strawberries are available. Field corn is planted and emerged. Most producers have completed the first cut hay harvest.

RHODE ISLAND

No reporter comments available.

VERMONT

BENNINGTON/RUTLAND, Tina Williams

Some much needed rain fell across the area giving the cropland a much needed boost.

FRANKLIN/GRAND ISLE, Heather Darby

Weather conditions continue to be good for field work - dry and moderate temperatures. Much second cut finished but yields were a bit low due to lack of moisture. Hay is high quality. Corn is reaching the top-dress stage and looks healthy. Some moisture stress seen.

FRANKLIN, Paul Stanley

A Monday rain has made for continued ideal moisture at opportune times to keep us from dry conditions in Franklin County, VT. Corn is looking fantastic with great growth response to what moisture we are receiving. Some second cut hay being harvested that is looking like our first cut in the same harvest timing with yields down and quality up. Strawberries are showing up all over and they are ideal, get out and enjoy the great picking weather. It's worth a day off.
