Fax: 603-225-1432

www.nass.usda.gov/nh Week ending October 28, 2018 Issued weekly on the internet, April - November by the Northeastern Regional Field Office of NASS

nassrfoner@nass.usda.gov Released October 29, 2018

**Fair week for field work:** New England averaged 4 days suitable for field work last week. Rain continued to fall hindering field work throughout the New England states. Nor'easter brought heavy rain, snow and some ice in many areas. Some areas of Massachusetts also saw strong winds and island hail storm as a result of a tornado. Regional weekly temperatures ranged from 2 to 12 degrees below normal. Weekly precipitation ranged from 0.00 to 2.93 inches throughout the region. Most field crops were already harvested but wet conditions made it difficult for growers to finish the last of the seasons harvest and clean up. Lower temperatures caused severe field frost injury on potatoes still left in the ground; yield was reported as average to below average. Cranberry harvest continued despite the rainy weather. Yield is expected to be greater than that of 2017. However, color and percent poor is higher for this year than previous years. Vegetable growers were finishing up field activities for the season. Field activities for the week included disking, cleanup and planting cover crops on harvested fields as well as equipment repair and maintenance.

### Soil Moisture for Week Ending October 28, 2018

### **REPORTERS COMMENTS, By County**

Reporters are from Extension Service (Ext), Natural Resources Conservation Service (NRCS), Farm Service Agency (FSA), Conservation District (CD), farmers, commodity specialists, or other knowledgeable individuals.

### CONNECTICUT

### LITCHFIELD, Richard Meinert

Frost is rapidly bringing the growing season to an end. Some after frost hay is still down - but drying days are hard to find, so it will likely stay in the field. Corn harvest is still dragging on in the wetter fields. Damage to soil from dragging equipment through for harvest is high. We have even had axles pulled off of dump wagons as they were towed through the mud!

#### MAINE

### AROOSTOOK (Central), Larry James

Temperatures in the low twenties several mornings has caused severe field frost injury for any potatoes still left in the ground. Average to below average yields reported. Soybeans are yet to be cut, but yields look like they will be excellent.

### FRANKLIN, Gary J. Raymond

Snow and cold weather brought most activities to a standstill this weekend. Most soybeans are in but there is still quite an amount of grain corn still standing. Manure pits are getting cleaned out to prepare for winter.

### PENOBSCOT/PISCATAQUIS, Donna Coffin

Snow and rain fell throughout the area. Hard frost was enough to damage skin of any squash left in fields. Some manure being spread, but fields are getting muddy with the rain/snow.

### MASSACHUSETTS

### ALL MA COUNTIES, Tom Smiarowski

Tornado touched down in Hardwick on Tuesday and other parts of Massachusetts saw strong winds and isolated hail though it appears negligible effect on agriculture. Heavy rain and winds on Saturday especially along the coast of Massachusetts caused power outages.

## BARNSTABLE/BRISTOL/DUKES/NANTUCKET/PLYMOUT H, Dr. Peter Jeranyama

According to the largest handler of processed cranberries, just over 50% of the acres have delivered/harvested fruit as of 10/20 (for MA). If the trend continues, it appears that the yield will be greater than in 2017 (for MA); there are approximately 3-4 weeks left for harvesting. Percent poor is higher this year so far compared to 2017 (6.6 vs 4.7). Color is lower than the past 5 years at this point in the season (30 for Tacy). Due to the warm fall, this is not unexpected.

### PLYMOUTH, Steve Ward

An especially rainy cranberry harvest season. Amazingly, the crop quality for processed fruit has held up well under the circumstances. Unfortunately, with the wet conditions, many fresh fruit growers were not able to dry harvest what they had originally planned, missing out on the premium prices.

### **NEW HAMPSHIRE**

### BELKNAP/STRAFFORD, Kelly McAdam

Saturday's Nor'easter brought heavy rains and snow and some ice to the region.

### CARROLL, Olivia Saunders

Wet conditions persist, making it difficult for growers to finish the last of the seasons clean up.

### COOS, Steve Turaj

Cooler conditions with both rain and some snow cover. Last of corn silage coming in although field conditions are somewhat wet. Open fields reveal the quite noticeable bear damage this season, also remarked on by farmers in Coos and neighboring Grafton County. Supposedly from low mast(nut crop). Soybeans yet to be harvested, crop year drawing to a close. Snow on the Mountains.

### GRAFTON, Heather Bryant

Much of the County saw a storm on Saturday that included sleet and rain.

### GRAFTON, Steven Schmidt

For the week ending October 27th, intermittent rain during the week delivered 1.48 inches of total precipitation. Conditions remained cool. The leaves have mostly dropped off the trees. Several frost events have helped shut down plant growth. Trees and plants are no longer putting water out of the soil, so the ground is retaining the precipitation that we get. Top soil moisture is improving, however sub soil moisture is still in deficit. Many brooks and streams remain low for this time of the year. Some reports are still coming in indicating that water supplies are still being impacted. Shallow wells have come back, while deeper wells have not yet fully recovered in some areas. Farmers are busy getting the last of their haylage into the bunker silo. Vegetable growers are finishing up field activities for the season. High tunnel vegetable growers still have few weeks to go. Corn ear development (grain corn) was below normal expectations for the 2018 year. Grain equivalent yields were highly variable, with the northern areas showing the greatest impact from drought conditions of this past summer.

### HILLSBOROUGH, George Hamilton

Weather: County-wide hard frost occurred several times during week. Cloudy, damp and colder weather weekend for on-farm sales of farm products. Fruit: Orchardists busy marketing crop. . Apple harvest is practically done. Harvesting Rome, Fuji, and Golden Delicious. Many orchardists are flail mowing apple drops under trees. Vegetables: Farmers are cleaning up fields, picking up plastic mulch, drip tape, and trellis stakes, seeding cover crops on harvested fields, draining and putting away irrigation equipment and soil testing fields for next season. Cleaning and putting away farm equipment. Field crops: Silage corn chopping is finished. Soil testing fields for next season and cleaning and putting away farm equipment. Seeding cover crops on harvested fields. Some manure spreading and incorporating in soil is taking place.

### ROCKINGHAM, Nada Haddad

More root crops are being dug and some late potato varieties still in the field waiting for the fields to dry. Cleaning vegetable fields from plastic. This week growers will be moving their sales from open air farmers markets into the indoors winter markets. CSAs are getting ready for the Holiday shares. The week saw some cold temperature, rain and gusty winds.

### RHODE ISLAND

ALL RI COUNTIES, Heather Faubert Seasonable temperature and rainfall.

### VERMONT

### BENNINGTON/RUTLAND, Tina Williams

Rain continues to fall hindering harvest of grain corn and soybeans. Pastures are turning to mud. Another wet week in store this week.

### FRANKLIN, Paul Stanley

Rain continues in Franklin County, VT this week giving the ground water a welcome recharge for winter. Much fall manure out with very little trouble getting around in the fields. The great pumpkin is going to be making his pass this week so be sure and check out those garden stands with any leftover oranges that might be the "O' great one".

LAMOILLE, Heather Mateja Cool and Wet. First snow on the fields.
