No. 977-02-08

WEATHER: It was a cool and wet week across upstate New York with temperatures below normal and precipitation generally above normal. A low pressure system using Gulf and Atlantic moisture brought a much needed moderate to heavy rainfall to central and eastern New York Monday into Tuesday. Some locations received one to one and a half inches of rainfall. A cool Canadian air mass brought dry and unseasonably cold weather to the region Wednesday and Thursday mornings. Record cold occurred Thursday morning with a widespread freeze where the growing season began in the Finger Lake Region, Mohawk, and Hudson River Valleys. Unsettled weather returned Thursday night through Saturday with scattered showers associated with a warm front. Cloudy and cool conditions persisted into the weekend with maximum temperatures close to 10 degrees below normal. Aside from Long Island, most locations fell below 32 degrees during the week.

CROPS: Cool, wet spring weather slowed farmers continuing their field preparation. Frost was reported in several counties across the state. Scattered showers throughout the state only allowed 3.9 days of suitable fieldwork. Soil moisture was rated 3 percent short, 79 percent adequate, and 18 percent surplus. Winter wheat condition was 12 percent fair, 73 percent good, and 15 percent excellent. Corn planting reached 14 percent compared to 8 percent last year and a five year average of 13 percent. Oat planting had reached 72 percent completed compared with 34 percent completion last year and 54 percent for the five year average. Potatoes were 42 percent planted compared with 23 percent at the same time last year and 24 percent for the five year average. The following are comments from reporters from across the state: Lewis County was cool all week with frost occurring Tuesday and Wednesday. Planting was underway in St. Lawrence County. Field preparation continued in Cortland County as farmers waited for the right time to begin planting corn. Corn planting was ahead for the season in Albany County. Montgomery and Fulton Counties had the planting come to a stop last week but plowing was still underway as farmers waited for a date to plant. Field work and planting continued at a rapid pace in Dutchess County. Rain halted the work in both Ontario and Niagara Counties.

FRUIT: Apples were at 20 percent petal fall, ahead of the 6 percent average progress. Peaches, pears, and cherries were at 60 percent full bloom, well ahead of normal. In the Lake Ontario fruit region, apples were in the midst of a potentially severe scab infection. Across the state, cold weather affected the fruit crop. Monroe County experienced cold weather that affected the cherries and peaches. Frost in the latter part of the week caused potential damage to fruit trees, grapes, and strawberries in Ontario County, while Albany County suffered severe damage to apples, pears, plums, and possibly strawberries. In the Finger Lakes vineyards, many grape varieties were 10-14 days ahead of average development and bud injury appeared relatively low after this past winter. Cold temperatures caused spotty frost damage to a few varieties, but overall damage was less than 5 percent. On Long Island, strawberry buds were beginning to open. Many varieties of grape buds were also starting to open, although cool weather slowed their growth.

VEGETABLE: There was much needed rain that swept throughout the state to aide in the dry spell. A cold front accompanied the rain and caused problems with its morning frost. It was reported in Madison Co. that planting was on schedule for sweet corn and a forecast of sun throughout the week will be helpful. Onions planted had the largest increase, plus 22 percent from previous week, to 43 percent planted. In Orange County, onion planting reached 63 percent complete. Sweet corn is at 20 percent, cabbage at 18 percent, and snap peas at 6 percent planted.

LIVESTOCK: Pastures continue to green across the state. Livestock were beginning to move back onto pasture as growth allows. Pasture conditions across most of the state were estimated to be in good condition. Pasture conditions were rated 1 percent very poor, 2 percent poor, 25 percent fair, 57 percent good, and 15 percent excellent.
