NORTH DAKOTA CROP, LIVESTOCK & WEATHER REPORT

Cooperating With:
NDSU EXTENSION SERVICE,
FARM SERVICE AGENCY,
ND AG WEATHER NETWORK (NDAWN)

UND AEROSPACE REGIONAL WEATHER INFORMATION CENTER

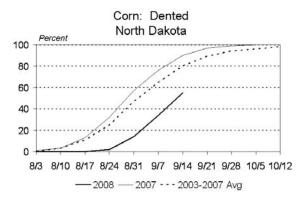

Released: September 15, 2008 For Week Ending: September 14, 2008

ND-CW3708

General: Mostly dry conditions early in the week gave way to rainfall late in the week, according to the USDA, National Agricultural Statistics Service, North Dakota Field Office. The southeastern corner of the state saw the greatest amounts of precipitation. Harvest made good progress until rain and cool weather slowed harvest at the end of the week. Corn producers remain concerned that the crop won't reach maturity before a killing frost, according to reporters. Topsoil moisture supplies were rated 16 percent very short, 14 short, 67 adequate and 3 surplus compared with the five-year (2003-2007) average of 15 percent very short, 32 short, 50 adequate and 3 surplus. Subsoil moisture supplies were rated 22 percent very short, 22 short, 55 adequate and 1 surplus compared with the average of 21 percent very short, 31 short, 45 adequate and 3 surplus. Statewide, on average, there were 4.5 days suitable for fieldwork last week.

Crops: Dry conditions early last week allowed small grain harvest to take steps closer to completion. Spring wheat harvested, at 91 percent complete, remained behind the 93 percent average. Durum wheat harvested reached 82 percent complete by week's end, compared with 94 percent last year and 84 on average. All other crop conditions improved last week except for sugarbeets which was unchanged. Corn in the dented stage advanced to 55 percent complete, compared with 90 percent last year and 80 percent on average. Corn mature, at 2 percent complete, progressed about two weeks behind the average pace. Soybeans had 75 percent of their acreage in the lower leaves yellowing stage and 30 percent in the dropping leaves stage, compared with 80 and 52 percent on average, respectively. Canola harvest advanced 15 percentage points to 67 percent complete by week's end. Dry edible beans had 77 percent dropping leaves and 17 percent cut, both behind last year and the average. Flaxseed harvest reached 47 percent complete by week's end. Potatoes dug, at 20 percent complete, remained behind last year and the average. The sunflower crop had 64 percent of the crop with bracts turned yellow, compared with 76 percent last year and 68 percent on average. Sunflower bracts turned brown reached 20 percent complete by week's end.

Livestock: Hauling hay and weaning calves were the main activities last week. The second cutting of alfalfa was 95 percent complete by week's end. Corn cut for silage advanced to 21 percent complete, compared with 32 percent last year and 45 percent on average. Pasture and range conditions were rated 17 percent very poor, 26 poor, 32 fair, 22 good and 3 excellent compared with last year when conditions were rated 3 percent very poor, 13 poor, 35 fair, 43 good and 6 excellent. Stockwater supplies were rated 56 percent adequate to surplus, compared with 78 percent last year and 64 percent on average.
