# Weekly Crop & Weather Roundup

Cooperating with the Pennsylvania Department of Agriculture 4050 Crums Mill Road, Suite 203 · Harrisburg, PA 17112

(717) 787-3904 · (717) 782-4011 FAX · www.nass.usda.gov

Week Ending July 10, 2011

Issued weekly, April-November

Released July 11, 2011, 4 pm

This report can be found on the Internet at www.nass.usda.gov/pa and click on "Pennsylvania Publications."

Excellent Week for Field Work: Pennsylvania had an average of 6 days suitable for field work. The warmer than usual temperatures being experienced over the past few weeks remained a concern for many producers in the keystone state this week. The scattered showers received by parts of the state this week were much welcomed, but more precipitation is needed to relieve the stressed crops in many fields. Primary field activities for the week included, topdressing corn, harvesting wheat, sweet and tart cherries, cutting hay, and hauling manure.

PA Topsoil Moisture for Week Ending July 10, 2011

Very Short	Short	Adequate	Surplus
Percent	Percent	Percent	Percent
14	33	52	1

Crop Progress: Corn has begun to silk and is at 9% compared to 20% at this time last year and the 5-year average of 15%. Corn has reached a measurable height of 53 inches, compared to 56 inches last year, and an average of 52 inches. The barley harvest is 95% complete, compared to 97%, and the average of 92%. Wheat continued to ripen and is at 97% compared to last year's 96% and the average of 91%. Harvesting of wheat is 68% complete compared to 83% a year ago and the average of 54%. Oats are 89% headed, behind last year's 97% and the average of 94%. Oats are 11% yellow compared to last year's 61% and the average of 36%. The second cutting of alfalfa is 75% completed, compared to 90% last year, and the average of 66%. Timothy/Clover first cutting is 94% complete, behind last year's 98%, but ahead of the average of 92%. Timothy/Clover second cutting has begun and is 13% complete, behind last year's 20%, but about the same as the 5-year average.

Crop Condition: State-wide corn conditions are; 1% very poor, 5% poor, 24% fair, 53 % good, and 17% excellent. Winter wheat conditions are; 2% very poor, 6% poor, 27% fair, 51% good, and 14% excellent. Oats conditions are; 0% very poor, 9% poor, 34% fair, 53% good, and 4% excellent. Soybean conditions are; 0% very poor, 3% poor, 19% fair, 67% good, and 11% excellent. Alfalfa stand conditions are; 2% very poor, 2% poor, 14% fair, 63% good, and 19% excellent. Timothy/Clover stand conditions are; 1% very poor, 3% poor, 13% fair, 69% good, and 14% excellent. Quality of Hay made is 1% very poor, 5% poor, 28% fair, 41% good, and 25% excellent. Pasture conditions are; 15% very poor, 14% poor, 27% fair, 39% good and 5% excellent. Peach conditions are; 0% very poor, 0% poor, 7% fair, 48% good and 45% excellent. Apple conditions are; 6% very poor, 13% poor, 19% fair, 49% good and 13% excellent.

Nationwide as of July 03, 2011: Warmer weather throughout much of the West promoted increased crop development of small grains in previously cool northern locations. Elsewhere, hot weather continued on the southern Plains, adversely impacting developing crops but promoting a rapid dry down and harvesting pace for winter wheat.

Welcomed rain fell in portions of the Southeast during the week, giving some producers the moisture they needed to begin or continue planting summer crops.

Corn: Nationally, 6 percent of this year's corn crop was silking by week's end. This was 12 percentage points behind last year and 6 points behind the 5-year average. Progress was well behind both last year and normal across most of the major producing regions. Overall, 69 percent of the corn crop was reported in good to excellent condition, up slightly from last week but 2 percentage points below the same time last year.

Soybeans: By July 3, emergence of the soybean crop had advanced to 96 percent complete, slightly behind last year but on par with the 5- year average. Blooming was underway in 17 of the 18 major soybean producing states and was 8 percent complete by week's end. This was 13 percentage points behind last year and 10 points behind the 5-year average. Late planting coupled with adverse spring and early-summer growing conditions in some areas contributed to a slow crop development pace. Overall, 66 percent of the soybean crop was reported in good to excellent condition, up slightly from last week but unchanged from the same time last year.

Winter Wheat: By week's end, 97 percent of the winter wheat crop was at or beyond the heading stage, slightly behind last year but on par with the 5-year average. Warmer weather promoted double-digit head development in Idaho, Montana, and Washington during the week; however, overall progress remained well behind normal. Nationwide, 56 percent of the winter wheat crop was harvested by July 3, four percentage points ahead of both last year and the 5-year average. Mostly sunny skies and dry weather allowed producers in several states ample time to harvest more than 10 percent of their crop during the week. Overall, 36 percent of the winter wheat crop was reported in good to excellent condition, up slightly from last week but 27 percentage points below the same time last year. **Small Grains**: Heading of the oat crop was 66 percent complete by week's end, 20 percentage points behind last year and 18 points behind the 5-year average. While heading was complete and harvest was nearly complete in Texas, head development was behind both last year and the average in all other estimating states. Overall, 59 percent of the oat crop was reported in good to excellent condition, up 2 percentage points from last week but 22 points below the same time last year. By July 3, barley producers had seeded 96 percent of this year's crop, 4 percentage points behind last year and 2 points behind the 5- year average. Ninety-three percent of the crop was emerged by week's end, 2 percentage points behind last year and 6 percentage points behind the 5-year average. The most significant delay was evident in North Dakota, where seeding delays coupled with unfavorable growing conditions limited crop development. Nationwide, 9 percent of the barley crop was at or beyond the heading stage by week's end, 30 percentage points behind last year and 38 percentage points behind the 5-year average. Overall, 76 percent of the barley crop was reported in good to excellent condition, up slightly from last week but 9 percentage points below the same time last year.

# **REPORTERS COMMENTS, By County**

Reporters are from Extension Service (Ext), Natural Resources Conservation Service (NRCS), Farm Service Agency (FSA), Conservation District (CD), farmers, commodity specialists, or other knowledgeable individuals.

# ADAMS COUNTY, Judy A Behney

Adams County had another week of hot and humid weather. Some areas of the county received significant rainfall (2" inches) on Thursday into Friday and others only received 0.2". The county is still dry and could use some steady rainfall. Corn is finally looking better and growing in height. Soybeans are looking better also. Doublecropped soybeans after wheat are being planted but most folks are calling it quits due to lack of moisture. Wheat harvest is about completed and some are saying they have good crops and others not so good. Hay continues to be made. Fruit crops continue to mature. Some early peaches, plums and apricots are being harvested. Other vegetables are coming along and also being harvested. Overall, the crops do not look too bad for as dry as it is this early but all producers are hoping for some moisture. Most producers are still putting in pretty long days working in the fields.

#### **BUCKS COUNTY, Michael Fournier**

Much welcomed rain came at the end of the week. Crops had been showing drought stress. Early corn is tasseling. Wheat harvest is continuing with variable yields. Double cropped soybeans are being planted.

# **CAMBRIA COUNTY, Dolly Little**

Very little rain received this week. Rains have been very spotty with little moisture. Even the showers received in the area provided little relief. Corn is curling and grains are not developing in the oats.

# **CENTRE COUNTY, Dick Decker**

Good week to continue with field work; 1/2" rainfall for the week

#### **CLARION COUNTY, Tom Tanner**

The counties need rain. The hot temperatures and windy days are damaging the crops.

# COLUMBIA COUNTY, John O Yocum

Getting dry in this area.

# FRANKLIN COUNTY, Thomas Kerr

Good week for field work. Do need some rain to help the corn and soybeans. Some of the corn on shallow soils showing heat and moisture stress. Pastures have fallen off this week as well. Early corn now shooting tassel. Cherry harvest is nearly finished with some reporting poorest crop in years. We will soon start early peaches.

#### LEBANON COUNTY, Charlene Ziegler

The last couple weeks have been busy with barley, rye and wheat combining and straw baling. Double crop soybeans are being planted. Alfalfa continues to be harvested for silage and dry bales. The corn is getting tall and beginning to tassel even though the conditions are dry. Soybeans are doing well. A good day of rain would be very beneficial.

#### **MERCER COUNTY, James P. Rust**

We received no rain this week. The rains went north and south of central Mercer County. All crops are under extreme stress and most crops like corn, soybeans, and all vegetables by 2 o'clock show signs of stress by curling up of the leaves. Pastures growth is none to zero. Local sweet corn harvesting is still more than a week away. Red raspberry harvest is in full swing. Late sprayed corn and soybeans with roundup are showing signs of weed pressure. Many farmers top-dressed hay fields with fertilizer the past few weeks and have had no rain for fertilization activation.

#### SNYDER COUNTY, William C. Sheaffer

Rainfall early in the week ranged from zero to nearly three inches throughout the county, and one-half to one inch at the end of the week. Second cutting of hay is near completion with the third cutting starting off looking very good. Some spraying for leafhopper maybe necessary. Main activities were haymaking, harvesting wheat, baling straw, and spraying.

#### SUSQUEHANNA COUNTY, Willie Keeney

Lots of Patriotic hay being made around the county. Ground conditions are finally favorable for making dry hay.

# UNION COUNTY, Glenn Spangler

Dry soil and weather conditions are showing up in wilted/curled corn, especially the later planted corn. Wheat harvest, straw baling, topdressing corn and herbicide spraying as well as some manure hauling on stubble fields have been occurring.

#### WESTMORELAND COUNTY, John Lohr

Some much needed rain fell on Friday, however, additional moisture is needed. Most of the week was excellent for harvest.

### PA Crop Progress for Week Ending July 10, 2011
