Week ending April 20, 2014

Issued weekly on the internet, April - November by the Northeastern Regional Field Office of NASS

nassrfoner@nass.usda.gov Released April 21, 2014

Poor Week for Field Work: Pennsylvania had an average of 3 days suitable for field work again this week.

Spring field work is underway in most parts of the state. Soil moistures have remained fairly constant since last week with majority of the fields having adequate moisture.

Temperatures ranged from 85 in South Central PA to only 15 in North Central PA. Winter Wheat and Hay conditions are still fairly good. Apple trees are finally starting to bloom, about the same time as they did last year. Looking to the week ahead, temperatures in Pennsylvania will range from the high 20's to the high 70's with most over overnight temperatures finally above freezing. There may be a few showers on Tuesday and Friday. Field activities for the week include spraying for insects, weed control, applying fertilizer, and readying equipment for fieldwork.

PA Soil Moisture for Week Ending April 13, 2014 (equal to 100%)

	Very	Short	Adequate	Surplus
	Short			
Topsoil	2%	2%	69%	27%
Subsoil	2%	3%	81%	14%

Crop Progress (in %):

REPORTERS COMMENTS, By County

Reporters are from Extension Service (Ext), Natural Resources Conservation Service (NRCS), Farm Service Agency (FSA), Conservation District (CD), farmers, commodity specialists, or other knowledgeable individuals.

ADAMS/FRANKLIN/ County, Thomas Kerr Frost and freeze the early part of the week may have done significant damage to peaches. Apricots and plums were heavily damaged. No damage to apples, but some farmers are reporting that some varieties will be short.

ADAMS County, Judy Behney

Adams County had sun most of the week except on Tuesday. Monday was in the 70's and Tuesday it rained most of the day with temperatures starting in the 60's but by night was around 32 with some snow flurries and till Wednesday morning 1.25" of rain was received. Wednesday through Friday mornings started out at 29 degrees and heavy frost all three days and warmed to 50 degrees and sunny blue skies. Last week some new hav established before last rains but that was near Littlestown where the best soils in the county are located because soil conditions were dry. The rest of the county is still trying to dry out to get into the fields for work. No oats has been seeded yet this Spring but producers are awaiting to do so when soil conditions in fields permit. Wheat and barley seeded last Fall are looking pretty decent and starting to get taller and greener except where lower areas of the fields are laying under water. Hay fields are also getting greener and starting to grow. No corn or soybeans have been planted in the county. Fruit growers are on edge here especially this week with cold temperatures in the mornings. The fruit trees are at a critical stage as they are about to bloom. The early blooming like tart and sweet cherries, apricots and plums are about ready to bloom with some more warm temperatures. Producers are concerned that tart cherries may have a loss due to last three days morning temperatures. Apple trees are coming along with bloom shortly. All fruit trees seem to be a little later than normal this year. Fruit growers will be applying sprays for pests, weeds and fertilizing trees all at the same time. PSU Extension Fruit Educator, Tara Baugher, sent email to fruit growers about the concern for disease in apples, like scab, because apple scab spores are rapidly maturing and beginning to discharge. This week with rainy weather and temperatures in the 60's was great conditions for scab infection.

ALLEGHENY County, Luke Fritz

Field work is finally underway and pastures and hay fields are starting to grow. Lime and manure spreading is being completed along with top-dressing fertilizer applications. Spring has finally arrived!

CENTRE County, Dick A. Decker

Finally some signs of spring. Alfalfa and oats seeding, manure hauling, plowing occupied suitable days.

INDIANA County, J Scott Overdorff

Got some more plowing done this past week, but still have a lot to do yet for oats ground. Have been working on getting all the lime spread for corn ground. The grass is starting to grow with the sunny days and warmer temps. Looking at this weeks' forecast they are calling for cooler temps after Tuesday with chances of rain showers. Hopefully this week we can get all our oats planted. Hope everyone has a safe farming week.

JUNIATA/SNYDER County, William C. Scheaffer Heavy rain and hard freezes has slowed to growth of the hay and grain crops. Weeds are beginning to show up in the winter grains. Very little fieldwork done this week.

PERRY County, David L. Swartz

Soils finally dried out by the latter part of the week to allow alfalfa seeding and other spring field work.

SCHUYKILL County, Kelly Sundy Snow & sleet occurred evening of 4/15/14 into early 4/16/14.
