Honey production from producers with five or more colonies in Wisconsin totaled 1.97 million pounds in 2021 according to the USDA, National Agricultural Statistics Service - Honey report. This was 12 percent lower than the 2.25 million pounds produced in 2020. The number of honey producing colonies in the state, at 42,000 , was down 3,000 from 2020. This number does not include producers with fewer than five colonies or producers who did not harvest honey. Yield per colony in Wisconsin averaged 47 pounds, compared to 50 pounds per colony in 2020. Wisconsin ranked seventeenth nationally in honey production, down from fifteenth place in 2020. Colonies which produced honey in more than one state were counted in each state where the honey was produced. Therefore, at the United States level yield per colony may be understated, but total production would not be impacted.

On December 15, 2021, producer honey stocks in Wisconsin, excluding stocks under government loan programs, were 750 thousand pounds, 12 percent lower than 2020. The state's 2021 honey crop was valued at $\$ 5.55$ million, down 21 percent from the previous year's $\$ 7.00$ million. The average price per pound for all marketing channels in Wisconsin was \$2.81, down 30 cents from 2020.

## UNITED STATES HONEY

United States honey production in 2021 totaled 126 million pounds, down 14 percent from 2020. There were 2.70 million colonies producing honey in 2021, down slightly from 2020. Yield per colony averaged 46.9 pounds, down 14 percent from the 54.5 pounds in 2020 . Colonies which produced honey in more than one State were counted in each State where the honey was produced. Therefore, at the United States level yield per colony may be understated, but total production would not be impacted. Colonies were not included if honey was not harvested. Producer honey stocks were 23.5 million pounds on December 15, 2021, down 41 percent from a year earlier. Stocks held by producers exclude those held under the commodity loan program.

United States honey prices increased 21 percent during 2021 to $\$ 2.54$ per pound, compared to $\$ 2.10$ per pound in 2020. United States and State level prices reflect the portions of honey sold through cooperatives, private, and retail channels. Prices for each color class are derived by weighting the quantities sold for each marketing channel. Prices for the 2020 crop reflect honey sold in 2020 and 2021. Some 2020 crop honey was sold in 2021, which caused some revisions to the 2020 crop prices.

The average prices paid in 2021 for honey bee queens, packages, and nucs were $\$ 20, \$ 91$, and $\$ 125$ respectively. Pollination income for 2021 was $\$ 269$ million, up 6 percent from 2020. Other income from honey bees in 2021 was $\$ 102$ million, up 82 percent from 2020.

[^0]:    ${ }^{1}$ Honey producing colonies are the maximum number of colonies from which honey was taken during the year. It is possible to take honey from colonies which did not survive the year.
    ${ }^{2}$ Stocks held by producers.
    ${ }_{4}^{3}$ Average price per pound based on expanded sales.
    ${ }^{4}$ Value of production is equal to production multiplied by average price per pound.
    ${ }^{5}$ Due to rounding, total colonies multiplied by total yield may not exactly equal production
    ${ }^{6}$ United States value of production will not equal summation of states.
